DitaExchange

Dx4™

Structured Content Management for Regulated Industries

Simplify the way you create, manage, deliver and re-use important content though structured content management solutions built to run on the SharePoint platform.

Dx4 from DitaExchange™ is a Structured Content Management (SCM) solution that makes it easy for organizations to create, manage, deliver and re-use important content, while enabling you to publish it anywhere, consistently, in the format you need for your readers.

By implementing a SCM solution, organizations can standardize information throughout their business, increasing document quality and decreasing review and approval time – as well as costs – significantly.

Dx4 uses the security of SharePoint and Office 365 and adopts the benefits of using DITA standards to produce content that is ready for automation, AI, machine learning, chatbots and other emerging technology.

Dx4 is particularly useful for regulated industries, such as financial services and life sciences, where accuracy, consistency and compliance is critical.

Create — **Manage** — **Deliver** — **Re-use**

Dx4 Features

Make structured content management easy by using standard business tools in a powerful way.

Drag and drop
DxNavigator is the next-generation interface for working in maps. Drag and drop, preview, and discuss topics all in a modern HTML5 interface.

Mix & match Word and DITA topics
Choose DITA XML or Word topics. Mix and match both topic types, even within a single map.

Choose your authoring tool
Improve your document authoring by using either Microsoft Word or other tools like Oxygen XML Web Author, a web-based solution that will ensure a simple and efficient collaboration within your team.

DITA features in Word Topics
DxAuthor extends Word's capabilities to incorporate DITA features such as content references into Word topics.

Make it your own
DxPublisher allows you to easily customize the look and feel of your documents. Publish to branded PDF or Word documents in minutes.

On-the-fly
Automatically generate HTML, JSON, or XML renditions of topics for presentation on a publishing site.

Review and approval
Use SharePoint's robust workflow architecture to track approval status for your maps and topics.
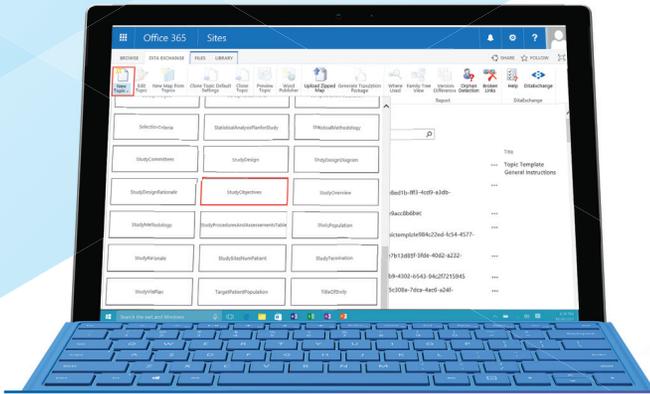

Translation support
Easily export content for translation, and track status of translation jobs in process.

Reporting
Easily see where a topic is used, fi nd orphan topics and broken links and more.

Structured Content Management.
No Coding Needed.

Simplify

If "Simplicity is the ultimate sophistication," then creating a single source of truth for content that is highly discoverable, infinitely re-usable and easy for end-users is Dx4. One of our core values is to "keep it simple" by developing robust solutions that keep simplicity at the core of design.

Beyond static content creation

With Dx4, authors don't create one document at a time. They create pieces of information called topics that are brought together using document maps. As needs change, new maps are developed that bring corresponding topics together for publishing, ensuring that documents are consistent and up to date – without having to start over with authoring and approval processes.

Authors, authors everywhere

Multiple authors from cross-organizational departments can not only contribute to a single document, but their topics can be reused as needed in other documents. Dx4 also enables true parallel authoring since multiple authors can be working within various topics at the same time, dramatically increasing productivity.

One world solution

Collaborating with colleagues down the hall or around the world, Dx4 just requires a log-in and you're all in the same room. Authors, reviewers and approvers can all collaborate in real-time – or whenever it's convenient for them – while using best-of-breed versioning, Microsoft Office, and other tools.

Flexible delivery

Running on premises or in the Cloud, the Dx4 solution can fit your needs now and into the future. Contact us to find out more about our flexible solutions that fit your business model, not the other way around.

Reduce training

It's not "Word-like", it IS Word. Dx4 uses a true Microsoft Word interface for authoring. Microsoft Office and its established tools (currently used by 1 in 7 people on the planet) will reduce the cost and time of training your employees.

Expand your SharePoint investment

Dx4 runs on the SharePoint platform, a significate part of Microsoft's $16 billion ecosystem for enterprise products and services. Chances are your organization is already using this powerful solution, so expand your usage – and your investment.

Industry expertise

The DitaExchange team has deep expertise in the financial services and life sciences industries, as well as DITA principles, to help guide you in developing your program.

Award winning

DitaExchange was the recipient of the 2012 Microsoft Global Life Sciences Innovation Award. DitaExchange helped one Top 10 pharma develop a practical approach to the auto-assembly of patient narratives, reducing time spent on authoring and review by over 90%.
